ELAN1 GOVERN · FRONT END · READ-ONLY CHECK

Completeness check — L1, L2, L3 and Sovereign

28 October 2026, evening. Nothing was built or changed for this check. It covers the console, the receipt verifier, the developer portal, the counterparty, regulator and partner portals and the status page. The public site is not included: it is already built.

> **How it was checked.**
> - **Code reviews.** Five reviewers each read one area of the code against the approved plan and the digests of the Information Memorandum, Technology Memorandum, Architecture Atlas and financial model. Each re-checked the gaps listed in the morning check (`07-completeness-check.md`).
> - **Static link check.** Every link target in the code was matched against the routes.
> - **Live crawl.** Every link was followed in the running app, signed in as each level's owner.
>
> **Not counted:**
> - The refusal price. 40% of the per-action rate is the rule. It is deliberate and is not stated in the documents.
> - The decisions in `08-conflict-decisions.md`. They are built, and are not reported as conflicts.
> - Items the memorandum marks LATER.
> - The partner programme, backend internals and separate products.

---

1. Summary

68	1,151	0	0	25 / 28
ROUTES IN THE APP	PAGES LOADED IN THE LIVE CRAWL	BROKEN LINKS	BUTTONS WITH NO ACTION	ROLE-AND-LEVEL SIGN-INS PRESENT (3 VIEWERS MISSING)

Every screen in the approved plan exists and opens at every level. No link is broken, no button is dead, and no panel is a placeholder.

What remains is depth. Many flows in the memoranda exist as a simpler version, or not yet:

- key failure handling;
- the L1→L2 close-out;
- pack certification;
- the developer path to production;
- several billing rules;
- some security controls, such as a second person for the emergency stop and break-glass.

Four decisions from this morning are not finished everywhere (§7).

LEVEL	WALKABLE END TO END?	MAIN THINGS MISSING OR PARTIAL

L1 Guarded Demo Traders	Yes	• Decide screen: no before→after diff, gate results, payload digest or blast radius. • No reversal, no "Approve and draft a rule", no fail-closed "Approvals unavailable" page. • Auditor pack is JSON only (no PDF, compliance map or README) and its manifest is unsigned. • Erasure is still gated at L2 on the record page. • No pilot tier or tracker. • Approve-by-link sign-in skips the two-step code.
L2 Attested Northbank	Yes	• Key failure: no compromise flow, "signing off" state, KMS reconciliation or DNS/printable fingerprint. • Upgrade close-out: no key-bind step, first-ten check, closing record, rollback or customer notices. • Export guards and the nightly integrity run are missing. • Pack factory: no certification, T1–T8 or P1–P12, and gates are hard-coded "Met". • The two invoice builders disagree on profile and bundle lines. • No viewer sign-in.
L3 Proven Kaveri	Yes	• Graduation: no automatic revocation, cooldown or precedent score. Sampled calls are not in the Work queues. • Counterparties: no replay detection, dual-control accept or first-issue warning. • Disclosure: no saved profiles, no range bundle, and no revoke or dispute for issued receipts. • No viewer sign-in.
Sovereign Deccan Cooperative Bank	Yes	• The deployment console is strong. • But Channels, You and Webhooks still offer Slack, WhatsApp and external URLs, which deny-all egress forbids. • Deccan appears on Elan1's public hosted `/status`. • No egress log, no way to carry the meter out offline, and no rollback of an update. • The emergency stop and break-glass need only one person. • HSM and retention figures disagree with the docs. • No viewer sign-in.

2. Demo sign-ins

Every listed account signs in to the right organisation and role with an active membership. Everyone except viewers has the two-step code, which the demo authenticator passes.

ROLE	L1 DEMO TRADERS	L2 NORTHBANK	L3 KAVERI	SOVEREIGN DECCAN
Owner	Ananya Rao	Rohan Kapoor	Dr Lakshmi Pillai	Suresh Nambiar
Admin	Rahul Menon	Neha Bhatia	Arvind Swamy	Anjali Kulkarni
Approver	Venkat Iyer	Gaurav Sethi	Revathi Natarajan	Prakash Deshpande
Second approver	Tom Whitfield, Arjun Nair	Imran Qureshi (wrong label)	Mohammed Rafi (no backup label)	Farhan Siddiqui (vague label)

Data protection officer (admin)	Fatima Sheikh	Shalini Rao	Dr Sneha Varghese	Meenakshi Sundaram
Viewer	Meera Shah (password only)	Missing (Pooja Malhotra exists, no sign-in)	Missing (Nandini Hegde exists)	Missing (Sunita Joshi exists)
Auditor	Kavita Desai (lands here)	Kavita, via switcher	Kavita, via switcher	Kavita, via switcher
Portals	Nisha Menon (counterparty, from Kaveri), R. Venkataraman (regulator, from Deccan), Vikram Desai (partner, from Kaveri). These work only while the issuing organisation has a live disclosure. There is no two-step code for them.			

Sign-in gaps from the morning check

GAP	STATUS	EVIDENCE
No viewer sign-in at L2, L3, Sovereign	Still open	`mock/users.ts:93-103`, `auth/registry.ts:129-144`
Approve-by-link skips two-step code, lockout, SSO-only and suspension; no session record or sign-in receipt	Still open	`ApproveByLinkPage.tsx:291,304`
Backup-approver labels contradict the escalation policy	Still open	`registry.ts:135,139,142` vs `platform.ts:180`
README said any 6 digits pass	Fixed	`README.md:16`
Auditor suspension in one organisation blocks all four	Still open	`registry.ts:391-393`, `LoginPage.tsx:65-70`
Sign-out leaves the session open and writes no receipt	Still open	`store/session.ts:59-62`
Forgot password does not cover portal accounts	Still open	`registry.ts:599`
Portal sign-in depends only on `?as=`	Still open	`LoginPage.tsx:186`
SAML "enforced" has no effect on password sign-in	Still open	`orgApi.ts:246-251`, `Sso.tsx:372`
A two-step code cannot be reused within 30 s (live-demo trap)	Partial	The message now explains it (`registry.ts:288-291`)
Lockout has no unlock; "Reset demo data" does not clear locks	Partial	A password reset clears it (`registry.ts:632`, `db.ts:848`)
No pre-seeded suspended account	Still open	No `status: 'suspended'` in `src/mock`

---

3. Links

CHECK	RESULT
Static: every link target in the code (`to=`, `href`, `navigate()`, nav and palette entries, settings redirects)	**989 targets, 91 distinct paths — none unresolved.** • Every `?tab=` value exists on its page. • All spot-checked query parameters are read. • Every `#anchor` resolves.

Live crawl, every link followed in the running app (receipt, record and approval detail pages sampled)	**1,151 pages loaded, signed in as each level's owner — 0 broken links, 0 error pages, 0 script errors.** L1 Demo Traders 315 pages (22,344 links followed or checked), L2 Northbank 248 (15,688), L3 Kaveri 321, Sovereign Deccan 267. Four `#EG-…` anchors on Coverage pages were flagged, but the page turns them into `?control=EG-…` as designed, so they are not broken.
Not opened on purpose	• Portal token links (`/counterparty/:token`): opening one records a view. • Single-use approval links (`/approve/:token`): opening one uses it up.
Content problem behind a valid link	`developers/TryIt.tsx:250` links to `/rulebooks/invoice-bot`. That slug exists only at Demo Traders, so it shows "not found" when signed in at L2, L3 or Sovereign.

---

4. Buttons and controls

Every button, menu item and palette item in `features/` and `shell/` has a working action.

- No `href="#"` and no toast-only actions.
- No "coming soon", "TODO" or "lorem" text.
- Every permanently disabled button has a tooltip giving the reason.

Five controls do less than their label promises:

CONTROL	WHERE	PROBLEM
Sign out	`shell/TopBar.tsx:121`, `Sessions.tsx:86`	Clears this browser only. The session stays live in Sessions and no receipt is written.
Reset demo data	`TopBar.tsx:119` → `db.ts:844-851`	Keeps sign-in locks, used codes, changed passwords and accounts created in this browser.
Require SAML for everyone	`settings/sections/Sso.tsx:372`	Saves the flag, but sign-in never reads it.
Sign in on an approval link	`ApproveByLinkPage.tsx:337`	Weaker than `/login` (see §2).
Sample bundles on the public `/verify`	`verify/bundle.ts:249,271`	Clicking a sample writes `evidence.exported` to Northbank, Kaveri or Deccan, which is billed as a ₹2,500 bundle.

---

5. Screens, panels and actions by area

B = built, P = partial, M = missing. **NEW** = not in the morning check. Evidence paths are under `elan1-govern-web/src/`.

5.1 Approvals and Work (L1 and up)

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Decide screen: field-by-field before→after diff, "Show all fields"	Missing	Only an arguments table (`approvals/ApprovalDetail.tsx:210-212`)
Decide screen: every gate's result with its version	Partial	Rule and rulebook version only; no G1–G9 results
Decide screen: payload digest	Missing	—
Decide screen: blast radius	Missing	—
Gate summary on queue rows	Missing	`ApprovalsPage.tsx:261-295`

"Payment recorded · proof #N", Open the record, Reverse this (30 days)	Partial	Result receipt link exists; no reversal or rollback anywhere
Approve and draft a rule	Missing	Only a separate Suggestions page
"Approvals unavailable" fail-closed page and outage state	Missing	A generic error banner only
Queue filters in the URL (waiting on me, expiring in 1 h, tool, counterparty)	Partial	View, search and agent only
One declared expiry extension	Built	`ApprovalDetail.tsx:447-494`
Same-actor copy / forbid mode	Partial	Flagged, never blocked (`work/backend.ts:143-154`)
Named, time-boxed delegate	Missing	—
Step-up for irreversible or high-value approvals	Partial	Password re-asked only when the sign-in is over 10 minutes old
Emergency stop under dual control	Missing	One person engages and lifts at every level, Sovereign included
Break-glass as a visible dual-control write	Missing	Advisory text only (`Sso.tsx:242,371`)
Today due-dates panel	Missing	Countdowns on queue items only
Approver telemetry and rubber-stamp sampling	Missing	—
Supervised 1-in-10 samples in the Work queues NEW	Missing	Reviewable only on Agents › Autonomy

5.2 Agents, autonomy and keys

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Model name and version on agents and AI systems	Missing	`types.ts:80-99`, `types.ts:332-349`
Graduation to A3: two people, 90 days / 200 records / 100 approvals, 30-day supervision, one-press revoke	Built	`lib/autonomy.ts`, `mock/platform.ts:1296-1399`
Graduation: precedent score	Missing	Numbers only
Graduation: 8 eligibility checks	Partial	3 checks, the ones decision 4 names
Graduation: automatic revocation and cooldown	Missing	Revoke is manual; re-proposal is allowed at once
Key-compromise flow (stop signing, unsigned interval, 24-hour notice)	Missing	—
Key windows: overlap, revoked status, refusal while a chain incident is open	Partial	Active / retired only (`types.ts:479`)
"Key bound · signing off" state	Missing	—
KMS Sign-call reconciliation	Missing	—
Auditor's evidence request as a recorded write	Missing	—
Fingerprint as a printable page and a DNS TXT record	Partial	Copy and PEM download only
KMS rotation writes its approval receipt before the rotation runs NEW	Partial	`agentsdoor/KeysPage.tsx:139-140`. A failed rotation leaves an orphan approval.

5.3 Evidence, exports, upgrade and the verifier

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
L1 auditor pack: PDF summary, compliance map, README	Missing	4-part JSON (`ExportPackDialog.tsx:38-44`)
L1 auditor pack manifest signed (last hash, file hashes, counts) NEW	Missing	`db.ts:1475`. A cut-off tail is caught only if a checkpoint covers it.
Framework report as PDF	Missing	JSON and CSV only
Nightly integrity-run history and continuity report	Missing	On-demand check only
Enforcement mode on the Assurance door and in every export	Partial	On screen, not in the bundle or pack manifests
L2 export guards (oversize split, clean range, residency gate, "Verify it yourself first")	Partial	Only VERIFY.txt and a "Check it here" button
Sandbox receipts marked as sandbox	Missing	No environment field on a receipt
Console export is one `.json`; docs say ZIP NEW	Partial	Only `/verify` re-saves as ZIP
"Export ready" screen shows the bundle digest NEW	Missing	`ExportPackDialog.tsx:245-258`
"Continuous" shown with a green tick; spec says never, with a "not checked over this range" state NEW	Partial	`AssuranceHomePage.tsx:150`
A tampered L1 sample on `/verify` NEW	Missing	The FAIL_INTEGRITY sample is an L2 bundle
Upgrade L1→L2: separate key-bind step	Partial	A tick box; key created at the final confirm
Upgrade: "Signing on at seq N" before the switch	Partial	Shown only afterwards
Upgrade: first-ten-records fingerprint check	Missing	—
Upgrade: tenant's first bundle, tampered copy exits 1	Partial	Export and verify works; no tampered run
Upgrade: closing record with seven checks; signed-island rollback; customer notices	Missing	—
Chain gap as a sealed gap record	Missing	—
Withdraw a declaration version	Missing	—
RBI model-documentation export	Missing	—
Hosting profile 2 (dedicated residency domain)	Missing	—

5.4 Data protection

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Consent ledger	Missing	Consent exists only as pack gate G1
Erasure plan preview, and refusal when statutory retention conflicts	Partial	A count of matching receipts only
Legal pages: privacy notice, cookie policy, sub-processor list	Partial	Terms and DPA only (`/developers/legal`); sub-processors are one DPA clause

5.5 Regulatory packs and verifier profiles

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Dry run at L1, live from L2 (decision 5)	Built	`packs/*`, `platform.ts`, `lib/profiles.ts`

Pack admission flow and portfolio register	Partial	Gates hard-coded "Met" (`lib/packs.ts:10-16`); no candidate or rejected packs
11-block pack detail	Partial	About 9 panels, not the factory's 11 blocks
T1–T8 test results; pilot block; 90-day pilot tracker	Missing	—
Separate author and certifier roles; certification flow; P1–P12; withdrawn status	Missing	Profile status is draft / certified / superseded only
Two-way reconciliation against the target system's audit trail	Missing	—
`not_measurable` and `out_of_scope` dispositions	Missing	pass / fail / not applicable only
Verifier-profile entitlement enforced NEW	Partial	A profile can be run or claimed without ordering it. The seeded L2+ orgs have no profile orders.
Uninstall or cancel a pack NEW	Missing	Once installed, billed for good
Profile run from a pack page writes a receipt with no role check NEW	Partial	`PackPage.tsx:84`; `ProfilesPage.tsx:57` says L1 previews are not recorded

5.6 Counterparties and disclosure (L3)

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Register read-only from L1 (decision 6d)	Built	`CounterpartiesPage.tsx`
Selective-disclosure bundle over a range	Partial	Up to 10 receipts, each its own package; no range or single file
Saved disclosure profiles	Missing	—
Replay detection	Missing	No nonce check
Dual-control receipt accept	Missing	One person; the API has no role check
Volume and reversal warning before the first issue	Missing	—
REVOKED and dispute states for issued receipts	Partial	Only disclosure packages can be revoked
Recorded check of a received receipt uses the key inside the receipt NEW	Partial	`platform.ts:927-933`. The in-browser check uses the published key, so the two can differ.

5.7 Billing and meter

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Unreconciled period blocks the invoice	Partial	Screen says "the invoice uses the lower number" (`BillingPage.tsx:296`); docs say it holds the invoice
Dispute settlement outcome (upheld, credit note, rejected)	Partial	Open and withdraw only
Discount line with an end date	Missing	—
Pilot tier (90 days free, 2,000-action stop)	Missing	—

"Modelled list price" label; "+4% a year after March 2029"	Partial	Says flat to March 2029; no +4% and no label
Overage discount cap	Missing	—
Cost per governed action published beside the refusal share	Missing	—
Main export dialog shows the ₹2,500 charge before generating NEW	Missing	Only in Data settings
Today "Meter" tile agrees with `/billing` NEW	Partial	• The tile uses modelled figures; `/billing` uses the chain. • At Sovereign the tile adds a monthly floor, while billing uses a yearly licence. • The year on the tile starts in January; the allowance year starts in April.
Pack and profile lines pro-rated NEW	Partial	Billed a full month; the floor is pro-rated

Every other price on screen matches the financial model: floors, allowances, per-action rates, ₹1,35,000, ₹3,00,000, ₹45,000 and ₹2,500.

5.8 Developer portal and the path to production

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Conformance suite C1–C14, levels CL-1 to CL-D	Missing	—
Offline-verifier release page (SHA256SUMS, signature, vectors, tampered bundle)	Partial	Install commands and a tampered sample only
43-code refusal register with a page per code	Missing	6 system ids listed (`sections/More.tsx:146-155`)
Glossary	Missing	—
Action Receipt standard: licences, governance, certification	Partial	Format and APIs only
Built-in MCP tool catalogue	Partial	Examples only
Rate-limit and Deprecation/Sunset headers	Partial	Rate-limit headers only
Support tiers	Missing	—
Self-serve sandbox tenant metered at 0	Partial	`sk_sbx_` keys and the TryIt sandbox; sandbox calls are still metered
Production-key request with human review	Missing	Owners and admins issue `gk_` keys directly
Promotion review, advisory → enforced	Missing	Route fixed when the agent is created
Onboarding refusal sentences for the 8 applicant categories	Missing	—
Changelog out of date order NEW	Minor	`More.tsx:166`

5.9 Operations and incidents

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Incident classes beyond stop, auto-pause and health	Partial	TSA, KMS, chain break, WORM, node and update exist. Missing: key compromise, isolation breach, declaring one by hand.

CERT-In 6-hour clock	Missing	—
L1 chain or write failure opens an incident NEW	Partial	Health detectors start at L2 (`work/backend.ts:852`)
`/status`: SLO cards, error budget, meter and writer components	Missing	—
Elan1-to-tenant notices (named contact, 30-minute updates, post-incident note, daily chain-head receipt)	Missing	—
Mobile PWA manifest	Missing	No manifest or icons in `public/` or `index.html`
System pages reachable (`/403`, `/offline`, `/maintenance`) NEW	Partial	Routes exist; nothing navigates to them and there is no offline listener

5.10 Sovereign-specific

ITEM	STATUS	WHAT IS MISSING / EVIDENCE
Deployment console: cluster, components, PostgreSQL RLS, OpenBao, object lock, customer HSM, local TSAs, deny-all egress, air-gapped signed bundles (import → verify → stage → apply)	Built	`deployment/DeploymentPage.tsx`
Channels, You and Webhooks respect deny-all egress NEW	Wrong	Slack, WhatsApp and external webhook URLs are offered to Deccan (`work/ChannelsPage.tsx:100`, `you/YouPage.tsx:218-229`, `Webhooks.tsx:214`)
Deccan kept off Elan1's public hosted `/status` NEW	Wrong	Its chain integrity and HSM row are shown publicly (`StatusPage.tsx:42-46,83-93`)
Egress log NEW	Partial	A 24-hour blocked count only
Carrying the meter to Elan1 with no egress (signed usage statement) NEW	Missing	—
Rollback of an applied update bundle NEW	Missing	Stage and apply only
Figures match the docs NEW	Partial	FIPS 140-2 and 10-year retention (`platform.ts:1867-1868`) vs FIPS 140-3 and 8 years in the docs
Emergency stop and break-glass need two people	Missing	Single person, as at every level

---

6. Built since the morning check

- **L1 copy.** L1 copy says "sealed in a hash chain"; L2 and above say "signed".
- **Autonomy.** Graduation only. A2 is the starting level, A3 comes by a two-person graduation with 30-day supervision, revoke is one press, and A4/A5 are shown as not yet available.
- **Approvals.** One declared 24-hour extension.
- **Verifier.** A batch timestamped by one authority is reported as degraded, not failed.
- **Packs.** They install at L1 as an unbilled dry run, and checks that need L2 evidence read not applicable.
- **Erasure** is available from L1 on `/records/erasure`. A test erasure kept the chain verifying.
- **Counterparty register.** Listed read-only from L1.
- **Billing.** The verifier profile is billed as its own line; each L2+ bundle is ₹2,500 and the L1 auditor pack is free.
- **Keys.** Agent keys are `gk_` and `sk_sbx_`.

- **README.** The two-step code text is now correct.

---

7. Decisions not finished everywhere

> **Update, 28 October 2026:** all four rows below have since been fixed and checked in the running app. Erasure opens from L1 on the record and DPDP pages, and the remaining L1 wording now says "sealed". Both invoice builders now bill the same pack, profile and bundle lines. Revathi's journey text now matches the review-after-run sampling.

DECISION	WHERE IT IS INCOMPLETE
6c Erasure from L1	• The record page still shows an L2 preview instead of the request form (`records/actions.tsx:369-375`). • "Erasure starts at L2" text remains in `RecordPage.tsx:186`, `RecordsPage.tsx:331` and `settings/orgApi.ts:52`. • The DPDP framework page shows an upgrade link at L1 (`FrameworkPage.tsx:275`).
2 "Sealed", not "signed", at L1	• The `/status` row detail says "checkpoint #N signature verifies" (`mock/platform.ts:2059`). • The verifier's Claim section for L1 packs (`verify/bundle.ts:392`). • The page description in `index.html:8`.
6e / 6f Billing lines	• The second invoice builder (`mock/db.ts deriveBilling`) never bills a verifier-profile line. • It hard-codes two bundles in September instead of counting exports. • In an upgrade month it bills packs differently from `chainMeter`.
4 Autonomy	The approver Revathi's demo journey text says she "decides held calls" sampled in supervision. Sampling is a review after the call runs (`auth/registry.ts`).

---

8. Open questions for you

- **Supervision sampling.** Is the 1-in-10 sample a review after the call runs (as built), or a hold before it?
- **Graduation checks.** Are 3 checks enough, or are the memorandum's other 5 checks still wanted?
- **Re-proposal.** Should there be a cooldown after a revoke before a graduation can be proposed again?
- **Emergency stop.** Should engaging it, lifting it, or both need a second person, and at which levels?
- **Public status page.** Should hosted customers' chain integrity appear by name on the public `/status`?
- **Sandbox.** Do per-agent sandbox keys plus the TryIt sandbox stand in for a separate sandbox tenant?
- **`/verify` samples.** Should clicking a sample on the public verifier write to, and bill, a demo tenant?

Prepared from five read-only code reviews, a static link scan and a live crawl of the running demo, 28 October 2026.
